

TELPHER

Name: Telfer

Location: HeBei Province, China

DESCRIPTION OF TELPHER

Telfer is a kind of ropeway. The sling is fixed on the carrier cable, and the carrier and the sling move with the movement of the carrier cable. Its transport vehicles contain lifting cars, lifting baskets, lifting chairs, towing tools, etc. The operating speed is generally less than 1.5m/s. Compared with other means of transport, telfer has many prominent characteristics. Firstly, it across the mountain and ground obstacles and has strong adaptability. With short distance, it helps tourists to save the travel time. Also, the structure of Telfer is compact which means there will be small damage to the natural landscape. It generally uses electric drive with low energy consumption and no pollution. And most importantly, the investment is relatively lower than other forms of transportation.
